INDUSTRY SOLUTIONS: Oil and Gas (Compression)

Monico provides a solution for equipment managers and compressor technicians to increase their visibility and knowledge into how their engines and compressors are working. The increase in visibility of what connected equipment is doing helps to facilitate a move from reactive equipment maintenance to proactive management of production optimization and servicing of equipment.

Goals and Challenges

- Keeping engines running at peak performance
- Avoiding or minimizing costly unplanned shutdowns
- Optimizing compressors for safety and productivity (i.e. flow)

The Solution

Connected Equipment Data Acquisition

- Connects to Engine and Compressor
- Translates Protocols (Cat® CDL, J1939)
- Logs Data
- Runs Edge Analytics

  Detailed compressor models
  - Machine Safety
  - Optimization

- Streams and Transmits real-time data to:
  - SCADA, HMI, PLC
  - IIOT Platforms (using OMF and MQTT)
  - OSIsoft® PI Systems
  - MonicoLive™

Benefits Of The Solution

- Provides immediate low cost access to OSIsoft® PI via MonicoLive™
- Enables proactive maintenance and service
- Improves engine/compressor production optimization capabilities
- Real Time High Fidelity Data for use in Diagnostics and Analytics

Data Interpretation and Visualization

- Provides Alerts and Notifications (email and text)
- Visualize Data from engine and compressor
- Stores data for historical analysis
- Trending and Cloud Analytics
- Subject Matter Expertise
  - Creation of pre-configured visualizations
  - Development of Analytics
    - (engine and compressor)
  - Cooperative Machine Troubleshooting

Your machine. Your data. Your way.
How it works:

Engine and compressor data is streamed in real-time using the mCore® SDR and then transmitted to either an existing OSIsoft® PI Solution, other Control or Monitoring Systems (IIOT, SCADA, HMI, etc.), or MonicoLive™ Remote Monitoring Solution hosted in the Microsoft® Azure Cloud.

Additional Value through Partnership

ACI Service - eRCM Express

Monico’s mCore® SDR, empowered with ACI’s eRCM Express™ technology, provides end users advanced protocol conversion capabilities and a real-time edge performance compressor modeling solution. ACI’s trusted expertise in reciprocating compressors and Monico’s industry leading knowledge and experience in industrial communications has led to the development of this unparalleled partnership. mCore® SDR, loaded with eRCM Express™, is an ideal solution for end-users, packagers, and automation companies needing to control and monitor their reciprocating compressors.

- Provides OEM-Compatible Modeling
- Models Single and Multi-Stage Units
- Predicts Safe Performance Across Unit’s Full Operating Map
- Calculates Full Rod Loads and Pin Reversals Per Throw
- Empowers UCP with Dynamic Speed and Pressure Safety Limits

Monico, Inc is not associated with or sponsored by Caterpillar® or Caterpillar® subsidiary Perkins.
