

Remote Monitoring Solution

MonicoLiveTM is a web-based service that combines Monico expertise with customer expertise to provide equipment managers the ability to remotely monitor critical assets. MonicoLiveTM includes **pre-configured dashboards** that provide immediate feedback as to overall health of connected equipment. Dashboards can be accessed from any internet enabled device with a web browser. The data infrastructure is built upon the OSIsoft[®] PI System that is used by over 250 of the fortune 500 companies. These companies invest millions of dollars to acquire, deploy, and manage OSI's software system, but with MonicoLiveTM, Monico customers can leverage Monico's expertise to quickly take advantage of equipment data and focus their resources on their core competencies.

Monitor Equipment

Live Stream Data from your Engines/Equipment

Gain Valuable Insights on:

- Equipment Performance
- Operational Metrics
- Utilization Metrics
- Productivity Metrics

Historical Data Retention

- Use historical data in Analytics
- Useful for Diagnostics Review
- Forensic Event Review

Visualize Data

Excellent tool for diagnosing equipment

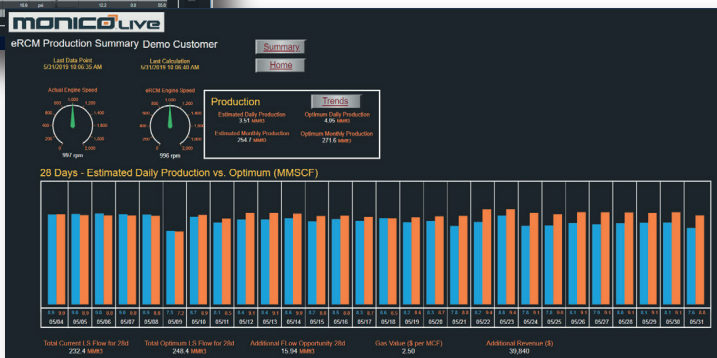

- Leverage tools to display data how you want
Bar Charts, Line Graphs, Gauges, etc.
- Useful to visualize relationships of data

Analytics

Identify trends, correlations and patterns in data to better understand what your connected equipment is doing and how it's performing

Alerts & Notifications

- Get notified when a condition is met
- Receive Critical Alerts via email and text
- Receive recommended Actions and Track Acknowledgments

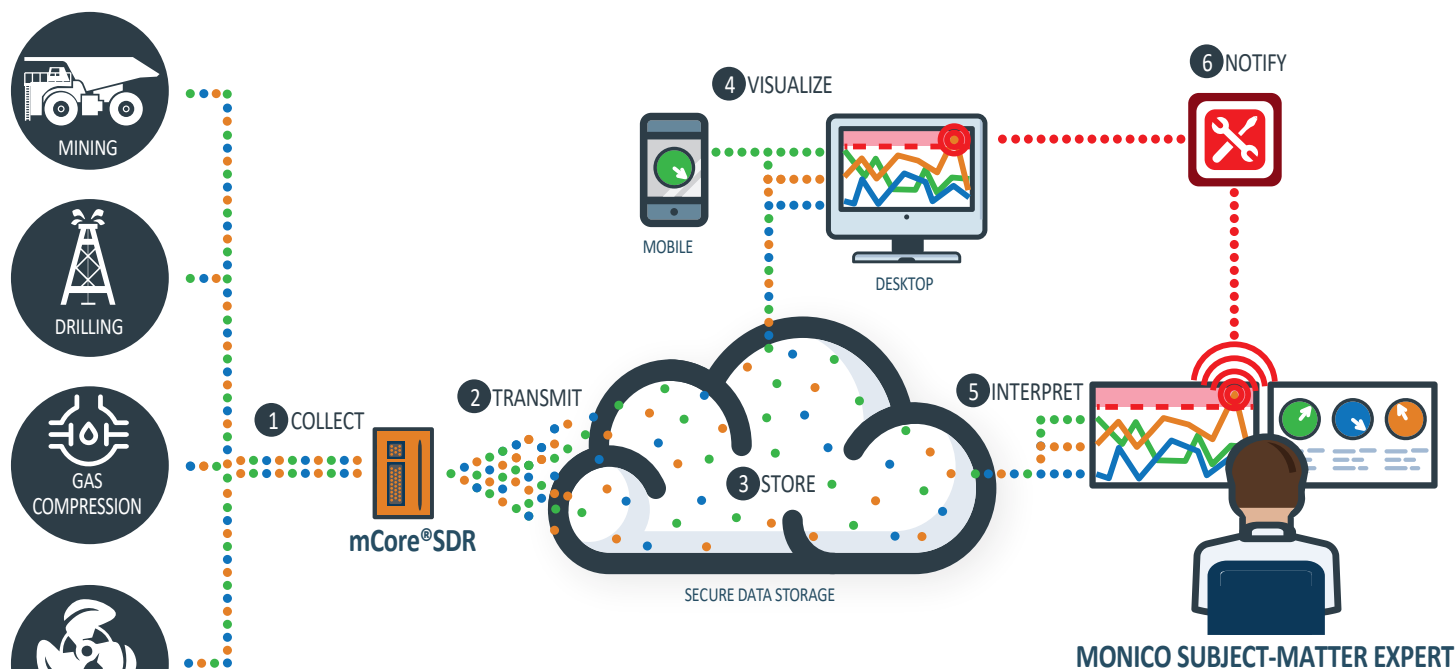

Remote Monitoring Solution

How it works:

Data is **collected**¹ from critical assets (e.g., industrial engines) in the field using **mCore[®]SDR** and **transmitted**² over ethernet connected cellular, satellite or local area wired network connection to the MonicoLive[™] Solution, hosted in the Microsoft[®] Azure Cloud where the data is processed and **stored**³. End users can log into the MonicoLive[™] Web Portal from any browser enabled device anywhere in the world and interact with the data through dashboards and screen **visualizations**⁴ of the data.

A pivotal and often overlooked component to remote monitoring is knowing what data means and knowing what data to watch, analyze and set alerts and notifications for. An added value to MonicoLive[™] is the incorporation of Monico's Subject Matter Experts in helping customers **interpret**⁵ the data and get the most out of MonicoLive[™] by working with them to understand what their equipment is telling them by building and refining analytics, defining **alerts & notifications**⁶, and creating visual tools for understanding the data.

Preconfigured MonicoLive[™] Solutions

MonicoLive Remote Monitoring Solutions are preconfigured

- No Setup Req'd - Prebuilt Screen Visualizations
- Alerts and Notifications Parameters Defined

Ability to customize your user experience:

- Add or modify visualizations to your needs

Your machine. Your data. Your way.
